

PROJECT > Building Expansion

Georgia World Congress Center, Atlanta, GA

PROJECT DESCRIPTION:

For the Georgia World Congress Center massive expansion project, Jollay Masonry turned to The QUIKRETE® Companies for the quality and efficiency of its pre-mix Core-Fill Grout (Coarse) and Spec-Mix Silo System. In fact, Jollay Masonry had been using this product for just about every other project and was extremely satisfied with the flexible application to pour at any time and any where on site without the logistics of scheduling or positioning ready-mix trucks. And as this was an all-interior application, the pre-mix Core-Fill Grout made it possible.

PROJECT DURATION:

A little over a year

PROJECT COMPLETION

DATE: 2002

Jollay Masonry strategically set up four silos at key site locations and received approximately three trucks of material a day. Even with a three-month delay at the start with the same original due date, Jollay Masonry was able to complete this project in little over a year, making the Georgia World Congress Center one of the largest convention centers in the country. The QUIKRETE® Companies are proud to have been a part of such a critical project for the city of Atlanta.

ARCHITECT:

Heery International, Inc.

CONTRACTOR:

Jollay Masonry

QUIKRETE® PRODUCTS USED:

- Core-Fill Grout (Coarse) – over 3000 bags (3000 lb. bulk bags)
