

PROJECT > BLVD

Base Coat Stucco - Pump Grade & Mason Mix Silo
Dallas, TX

PROJECT DESCRIPTION:

BLVD is a mixed use development located in Dallas, TX. The project includes 417 residential units and ground level retail store fronts.

More than 120,000 square feet of QUIKRETE® Base Coat Stucco - Pump Grade was spray applied in a 3-coat (3/4") wall system. Trinity Drywall & Plastering Systems utilized 3,000 lb bulk bags of the fiber-reinforced base coat along with a QUIKRETE® Mason Mix, auger-driven silo, to consistently feed the pump. The pre-blended material also reduced the space required for the mixing station.

The BLVD building is certified as a green facility. LEED points were earned by eliminating paper bag disposal and QUIKRETE®'s proximity to the project.

ARCHITECTURAL FIRM: Humphreys & Partners Architects, LP

GENERAL CONTRACTOR: Andres Construction

STUCCO CONTRACTOR: Trinity Drywall & Plastering Systems

DISTRIBUTOR: Specified Products, Dallas, TX
