PROJECT > Baton Rouge Magnet High School

Mason Mix Baton Rouge, LA

PROJECT DESCRIPTION:

Baton Rouge Magnet High School, constructed in 1927, has undergone an extensive renovation of its original four story brick and limestone structure, plus a 110,000 square foot addition.

QUIKRETE® has provided a Type 'O' Mason Mix mortar, specifically formulated and pigmented to match the original mortar color and texture on the historic building. All deteriorated mortar joints were cut-out to a depth of 1/2" and then tuck-pointed with the Type 'O' mortar. Many of the bricks required complete mortar joint replacement.

QUIKRETE® Type 'S' Mortar, pigmented to match the original mortar color, was used on all structural and non-structural masonry construction on the new addition. The mortar was provided in 3,000 lb bulk bags with a silo delivery system.

QUIKRETE® Mason Mix mortars exceed ASTM C 270 and ASTM C 1714 specifications for dry preblended mortars.

GENERAL CONTRACTOR:

Wasco Masonry (Restoration)
Mapp Construction (New Construction)

QUIKRETE® PRODUCTS USED:

- 80 lb Mason Mix Type 'O': 2,436 bags
