

Tabor Center

QUIKRETE® Q•MAX™ Pro Concrete Mix
Denver, CO

PROJECT DESCRIPTION:

Denver's premier mixed-use complex, Tabor Center consists of a 30-story class AA office tower, a Four Diamond Westin hotel, a three-level retail center, and a 40,000-square-foot athletic club. Located in LoDo (Lower Downtown), a deteriorated and aging Tabor Center parking garage was rehabilitated with QUIKRETE® Q•MAX™ Pro concrete. In order to minimize disruption at Tabor Center and other shops, restaurants and entertainment venues in the popular downtown district, Western Specialty Contractors selected QUIKRETE® Q•MAX™ Pro because it is

formulated to provide rapid strength and adequate working time. This allowed Western Specialty Contractors to complete the necessary repairs over the Memorial Day weekend using more than 72,000-pounds of QUIKRETE® Q•MAX™ Pro applied at minimum thickness of 2".

QUIKRETE® Q•MAX™ Pro is a commercial-grade concrete mix that delivers one-hour working time, three-hour walk-on time and 6,500 PSI compressive strength. It also features alkali-resistant fiberglass for crack resistance, an air-entraining admixture for improved freeze-thaw durability, and an integral corrosion inhibitor. Ideal for pavements, parking structures, bridge decks, ramps, loading docks, slabs, footings, steps, columns, walls, floors, sidewalks, patios and other concrete surfaces, QUIKRETE® Q•MAX™ Pro meets ASTM C 387/C 387M specifications.

DISTRIBUTOR:

ProCoat Systems

SUB-CONTRACTOR:

Western Specialty Contractors

QUIKRETE® PRODUCTS:

- 80 lb Q•MAX Pro Concrete Mix:
210 bulk bags
- 3,000 lb Q•MAX Pro Concrete Mix:
19 bulk bags

PROJECT START DATE:

May 26, 2017

PROJECT COMPLETION DATE:

May 29, June 2017
