

## The Huntington

QUIKRETE® Base Coat Stucco – Pump Grade  
Plano, TX

### PROJECT DESCRIPTION:

The Huntington is a 320-unit apartment community that delivers an upscale living experience featuring a swimming oasis, fitness center, pet-friendly open space, outdoor entertainment area and other desirable amenities. Located on 5.5 acres of greenspace, The Huntington features wide corridors, large elevators and other design elements that give it the look and feel of a luxury hotel. That environment is further personified by a combination veneer stone and stucco exterior. Keller Masonry used more than 150,000 square-feet of QUIKRETE®

Base Coat Stucco – Pump Grade in two applications on the project. The first was a traditional 3-coat stucco system with an acrylic finish applied as the brown coat. In the second application, the stucco served as a scratch coat for the veneer stone installation. The stucco in both applications was spray-applied from a silo system, which proved especially effective in tighter areas on the job-site like the courtyard.

QUIKRETE® Base Coat Stucco – Pump Grade is a flowable, high workability plaster particularly designed for spray applications. It is a fiber reinforced Portland cement based stucco, designed to be used as the scratch and/or brown coat in a 3-coat stucco application, or the first coat in a 2-coat application.

**DEVELOPER:**  
Lincoln Property Co.
