NON-SHRINK PRECISION GROUT

PRODUCT DESCRIPTION
QUICKRETE® Non-Shrink Precision Grout is a high strength, non-metallic, Portland cement based material with expansive additives designed for grouting steel columns, bearing plates, pre-cast concrete, and anchoring applications.

PRODUCT USE
Typical applications for QUICKRETE® Non-Shrink Precision Grout include grouting of:
- All types of machinery
- Steel columns
- Bearing plates
- Precast concrete
- Other anchoring conditions that require high in-service strength

The non-shrink characteristics of Non-Shrink Precision Grout make it stable and capable of handling high load transfers.

SIZES
- QUICKRETE® Non-Shrink Precision Grout - 50 lb (22.7 kg) bags

YIELD
- Each 50 lb (22.7 kg) bag will yield 0.45 cu ft (12.7 L) at Flowable consistency.

TECHNICAL DATA

APPLICABLE STANDARDS
ASTM International
- ASTM C827 Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens of Cementitious Mixtures
- ASTM C939 Standard Test Method for Flow of Grout for Preplaced-Aggregate Concrete (Flow Cone Method)

- ASTM E488 Standard Test Methods for Strength of Anchors in Concrete and Masonry Elements
- U.S. Army Corps of Engineers (USACE) - CRD 621

PHYSICAL/CHEMICAL PROPERTIES
QUICKRETE® Non-Shrink Precision Grout complies with the physical requirements of ASTM C1107 and CRD 621 when tested at 72 degrees F (22 degrees C).

SURFACE PREPARATION
- The appropriate personal protective equipment should be worn.
- All grouting surfaces should be clean and free of foreign substances including corrosion present on steel if applicable.
- Remove all spalled areas and areas of unsound concrete.
- Preparation work done on the grouting surfaces should be completed by high pressure water blast, breaker, hammer, or other appropriate mechanical means to obtain a properly prepared surface.
- Saturate repair area with clean water before patching to ensure SSD condition. No standing water should be left in the repair area.
- Refer to current ICRI Guideline 310.2R for additional surface preparation information.

MIXING
QUICKRETE® Non-Shrink Precision Grout should be mechanically mixed for a minimum of 5 minutes. Add only enough water to achieve the flow required for the application. Place the grout quickly and continuously using consolidation techniques when possible (i.e. light rodding, vibrating, tamping, etc.) to eliminate air bubbles. QUICKRETE® Non-Shrink Precision Grout can be placed in fully restrained areas from 0” to 3” thick without gravel extension.
CURING
A damp cure of at least 3 days is necessary to control the non-shrink characteristics and maintain strength levels.

PRECAUTIONS
• Additions of cement or other materials will eliminate the designed product qualities
• Water quantities may be affected by temperature, mixing method and batch size
• QUIKRETE® Non-Shrink Precision Grout should not be re-tempered
• Mix no more grout than can be placed in 25 minutes.
• Grout temperature should be maintained from 50 - 90 degrees F (10 - 32 degrees C).
• Follow ACI 305R-10 when using product in hot weather.
• Follow ACI 306R-10 when using product in cold weather.
• Use a consistent water temperature, when mixing multiple batches, to prevent performance fluctuations.

WORKING TIME
When properly mixed to a fluid consistency QUIKRETE® Non-Shrink Precision Grout will comply with all portions of ASTM C1107 and CRD 621 and retain a fluid consistency for the maximum useable working times stated in Table 3.
