

<b>Project</b>	<b>Shuffleboard Court</b>
----------------	---------------------------

Shuffleboard is a popular pastime for people of all ages, and with QUIKRETE® Fiber-Reinforced Concrete or QUIKRETE® Concrete Mix it's easy to make your own shuffleboard court for your backyard.

You'll need a long, narrow area: an official shuffleboard court is 52' long and 6' wide, although it can be as small as 28' long and 3' wide.

Once you've chosen a good spot for the court, it is simply a matter of building the forms and pouring the concrete slab. Work the concrete with a steel trowel to produce a smooth, hard finish. When the concrete has started to harden, coat the surface with QUIKRETE® Acrylic Concrete Sealer. This will make the surface smooth enough to accommodate the wooden discs. When the sealer has dried, paint on the lines and numbers as shown in the illustration.
